Scenario-based question?

The interviewer was given a table that contained the Name and Price. The task is to create "Avg Price" and the total also show "Total Price"

Name	Price	Avg Price
Product C	50	48.00
Product A	30	48.00
Product B	60	48.00
Product D	80	48.00
Product E	20	48.00
Total	**240**	**240.00**

→ The Required Out put

Step1

Create measure calculate "Avg Price"

Avg Price =
CALCULATE (AVERAGE ('Product_Table'[Price]), ALL ('Product_Table'))

Name	Price	Avg Price
Product C	50	48.00
Product A	30	48.00
Product B	60	48.00
Product D	80	48.00
Product E	20	48.00
Total	**240**	**48.00**

The measure shows the Avg price

Totals are not completed

Step2

Create measure calculate "Avg finalPrice"

Avg final value =
IF (
HASONEVALUE ('Product_Table'[Name]),
[Avg Price],
SUMX ('Product_Table', [Avg Price])
)

Step2

Name	Price	Avg Price
Product C	50	48.00
Product A	30	48.00
Product B	60	48.00
Product D	80	48.00
Product E	20	48.00
Total	**240**	**240.00**
